

Coppabella Ultra-class Facility

The Coppabella MIA upgrade included the installation of an additional workshop and lube facilities for new ultra-class vehicles.

The facility is a single, high-roof workshop with a 25-tonne overhead crane, storage racking and 300 metres of stainless steel pipework. The installation of the crane was meticulously planned for maximum safety, which involved picking it up from the inside rather than the outside. Hawkins Group also designed and constructed a 450 m² extension to the administration building.

Client:

Peabody Energy

Location:

Coppabella Mine, Central Queensland

Project value:

–

Contract type:

Design and construct

Completed:

2013
