

Sonoma Mine MIA

This major project included offices, wash-bay, workshops, fuel farm, jacking slab and boilermakers' shed.

Hawkins Group scheduled the project to begin with the offices so organisation functions had accommodation and then worked on a phased plan to complete the complex fuel, wash-bay and workshop areas with their related tanks and piping. The layout was designed for safety and efficiency during Sonoma's daily operations.

Client:

Leighton Contractors
– Q Coal

Location:

Sonoma Mine

Project value:

\$3 million

Contract type:

Design and construct

Completed:

2009
